

VISION

Every astronaut
rides on rocket
engines tested
at Stennis
Space Center

NASA is
an investment in America's
future. As explorers, pioneers, and
innovators, we boldly expand frontiers
in air and space to inspire and serve
America and to benefit the
quality of life on Earth.

NASA's Mission at Stennis Space Center

- Managing NASA's rocket propulsion test programs and facilities for current and future space vehicles and providing test services for government and commercial customers
- Conducting Earth science applications to include a broad range of remote sensing technologies focusing on systems and tools that help monitor the health of our nation's land and coastal resources
